To: Eclipse RipGuard Customers

Date: June 29, 2010

Subject: EclipseSuite RipGuard Plug-In Upgrade

Description:

This TechFlash document is intended to notify Eclipse RipGuard customers of the availability of an updated RipGuard rules file. This rule is used when the EclipseSuite tools detect the RipGuard copy protection on an image. For more details contact Rovi customer support.

System Requirements:

This file will only work with EclipseSuite 5.2 or later.

Installation Instructions:

It is recommended that you backup your existing RipGuard rules file. The file is located in the same directory as the EclipseSuite applications and has the same filename as the RipGuard Plug-In (e.g. RipGuard.rul). Copy the new file to the same folder where the EclipseSuite applications are located (e.g. C:\Eclipse\ImageTools71). If you have renamed the RipGuard Plug-In from its original filename, then you must also rename the rules file to match the Plug-in.

Download Instructions:

The RipGuard rule file is available for download from the following ftp link.

ftp://ftp.eclipsedata.com/Misc/Ripguard.zip
